## Chapter 3 Adobe Animate Stage & Tools

### Learning Outcome

#### Objectives of this chapter are: -

- Adobe Animate Stage
- Adobe animate Tools

### Introduction

We have learned briefly about Adobe Animate interface panel. We are going to explore the panels in dept.

### Animate Stage

The Stage is the rectangular area where you place graphic content when creating Animate documents. The Stage in the authoring environment represents the rectangular space in Flash Player or in a web browser window where your document appears during playback. A default black outline represents the outline view of the stage.

To change the view of the Stage as you work, zoom in and out. To help you position items on the Stage, you can use the grid, guides, and rulers.

Figure 1 The Timeline and Stage with content.

## Zoom the stage

To view the entire Stage on the screen, or to view a particular area of your drawing at high magnification, change the magnification level. The maximum magnification depends on the resolution of your monitor and the document size. The minimum value for zooming out on the Stage is 8%. The maximum value for zooming in on the Stage is 2000%.

**You can also use multi-touch gestures in compatible devices.**

- To zoom in on an element, select the Zoom tool  in the Tools panel, and click the element. To switch the Zoom tool between zooming in or out, use the Enlarge  or Reduce  modifiers (in the options area of the Tools panel when the Zoom tool is selected) or Alt-click (Windows) or Option-click (Macintosh).
- To zoom in so that a specific area of your drawing fills the window, drag a rectangular selection on the Stage with the Zoom tool.
- To zoom in on or out of the entire Stage, select View > Zoom In or View > Zoom Out.
- To zoom in or out by a specified percentage, select View > Magnification, and select a percentage from the submenu or select a percentage from the Zoom control at the upper-right corner of the document window.
- To scale the Stage so that it fits completely in the application window, select View > Magnification > Fit in Window.
- To crop the content that flows outside the stage, click the Clip the Content Outside Stage icon .
- To show the contents of the current frame, select View > Magnification > Show All, or select Show All from the Zoom control at the upper-right side of the application window. If the scene is empty, the entire Stage appears.
- To show the entire Stage, select View > Magnification > Show Frame or select Show Frame from the Zoom control at the upper-right corner of the document window.

## Pasteboard color

Earlier, the Pasteboard colors were fixed based on the User Interface theme. From January 2017 release onwards, you can have the pasteboard same as that of Stage color. This feature enables you to work with an infinite canvas.

Only stage content is visible in the final output.

Figure 2 change pasteboard color

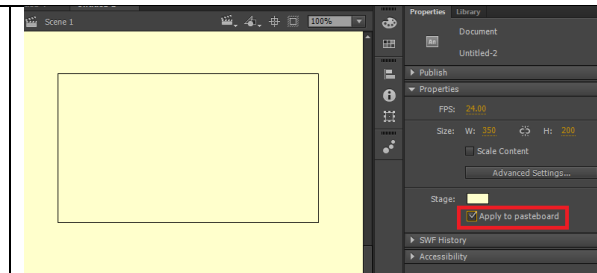

Figure 3 pasteboard color after applied

## Move the view of the Stage

When the Stage is magnified, you may not be able to see all the stage. To change the view without having to change the magnification, use the Hand tool to move the Stage.

You can also use multi-touch gestures in compatible devices.

- In the Tools panel, select the Hand tool and drag the Stage. To temporarily switch between another tool and the Hand tool, hold down the Spacebar and click the tool in the Tools panel.

## Rotate the Stage

Animate introduces a new Rotation tool that lets you rotate the Stage view temporarily, to help you draw and paint at a particular angle, without permanently rotating the actual objects on stage as the Free Transform tool does. You can quickly rotate the Stage, regardless of which tool you have currently selected, by holding down the **Shift** and **Space** keys together, and then dragging your mouse to rotate the view.

### To rotate the stage using the Rotation Tool

- Choose the Rotation tool  (H), that is grouped together with the Hand tool  (H) or, press **Shift** and **Space** keys together to switch to Rotation Tool temporarily while working with any other tool, such as Brush.

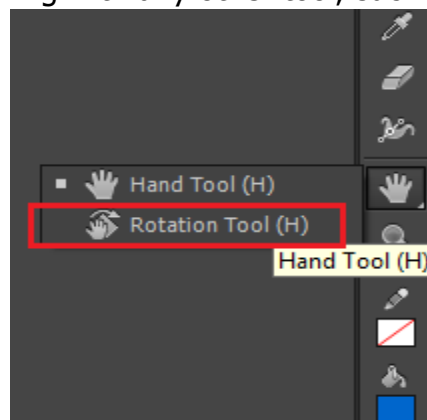

Figure 4 Rotation Tool on the toolbar

- Once the Rotation Tool is selected, Pivot point for rotation appears on screen, indicated by a crosshair. You can change the position of the Pivot point by clicking at the desired position.

*Figure 5 The crosshair pivot point*

- Once the Pivot point is set, you can drag the mouse to rotate the stage view around the pivot point.

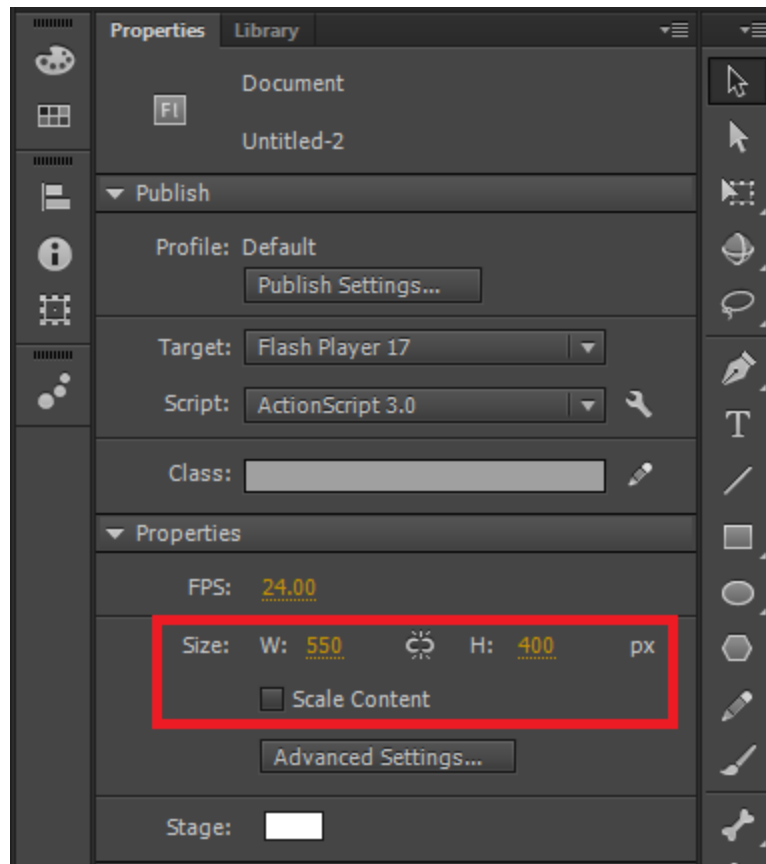

*Figure 6 Rotated stage*

- Using the stage Rotation Tool, drag to rotate the stage area temporarily. The current rotation angle is indicated by the red line on the Pivot crosshair.
- To reset the stage to its default view, click the Center Stage button .

### Scale content to fit the stage size

The **Scale Content** option in PI allows you to scale the contents on your stage according to the stage size. When stage is resized with this option selected, content resizes in the same proportion as the stage.

*Figure 7 Scale content option in PI*

## Scale stage size

The Scale Content option in advanced settings is now directly accessible from PI. When stage is resized with this option selected, content resizes in the same proportion as the stage.

PI and Document Settings dialog box contain a Link option to increase the stage dimensions proportionately. By default, the height and width properties of the stage are unlinked. If you click the Link button and enable linking, as you modify the values of either height or width properties, the value of the other property is changed proportionately.

If you select the Scale Content option, the stage dimensions are automatically linked and disabled. This is because content scaling makes sense if stage dimensions are modified proportionately.

*Figure 8 Link button to proportionately scale stage size*

## Set Canvas Transparency

You can set the canvas to the transparent mode by selecting the alpha color ranges in percentage in your color swatches. To do so, select canvas>Properties> Stage> Alpha %.

## Scale stage based on selected anchor

You can select an anchor point in Document Settings, specify the height and width, and scale the stage to the dimensions. When 'Scale Content' is disabled, the stage expands in the directions according to the selected anchor point, as detailed in the following images.

*Figure 9 Anchor points based on which you can scale the stage*

## STAGE SCALING: AN EXAMPLE

In the following example, the stage measuring 550x400 is proportionately scaled to 750x600 from the anchor point at the bottom right corner of the stage: -

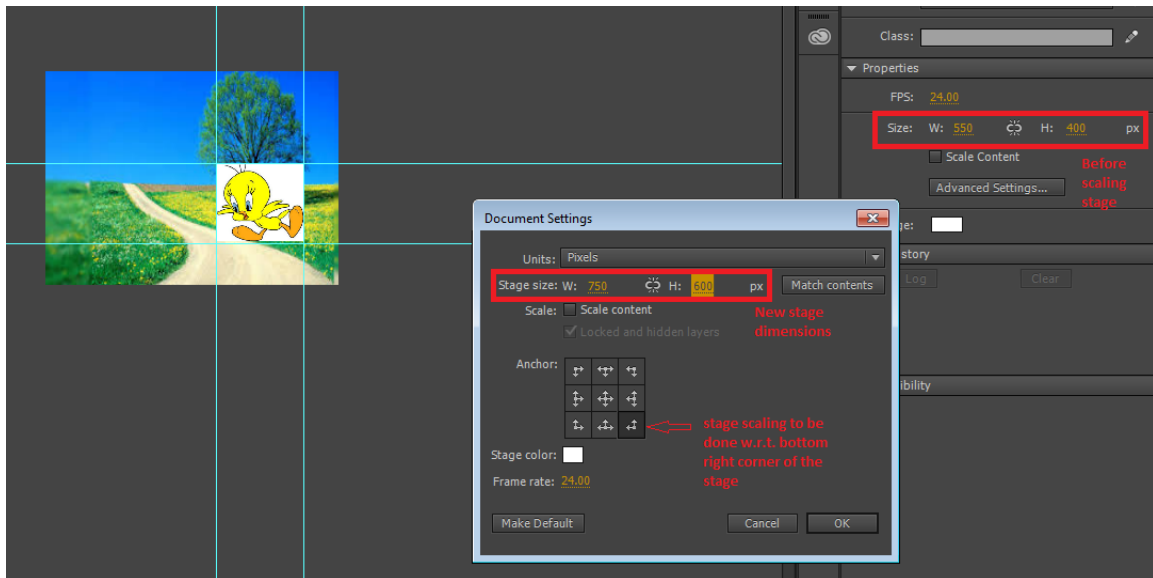

Figure 10 Setting stage scaling with the bottom right corner as anchor point

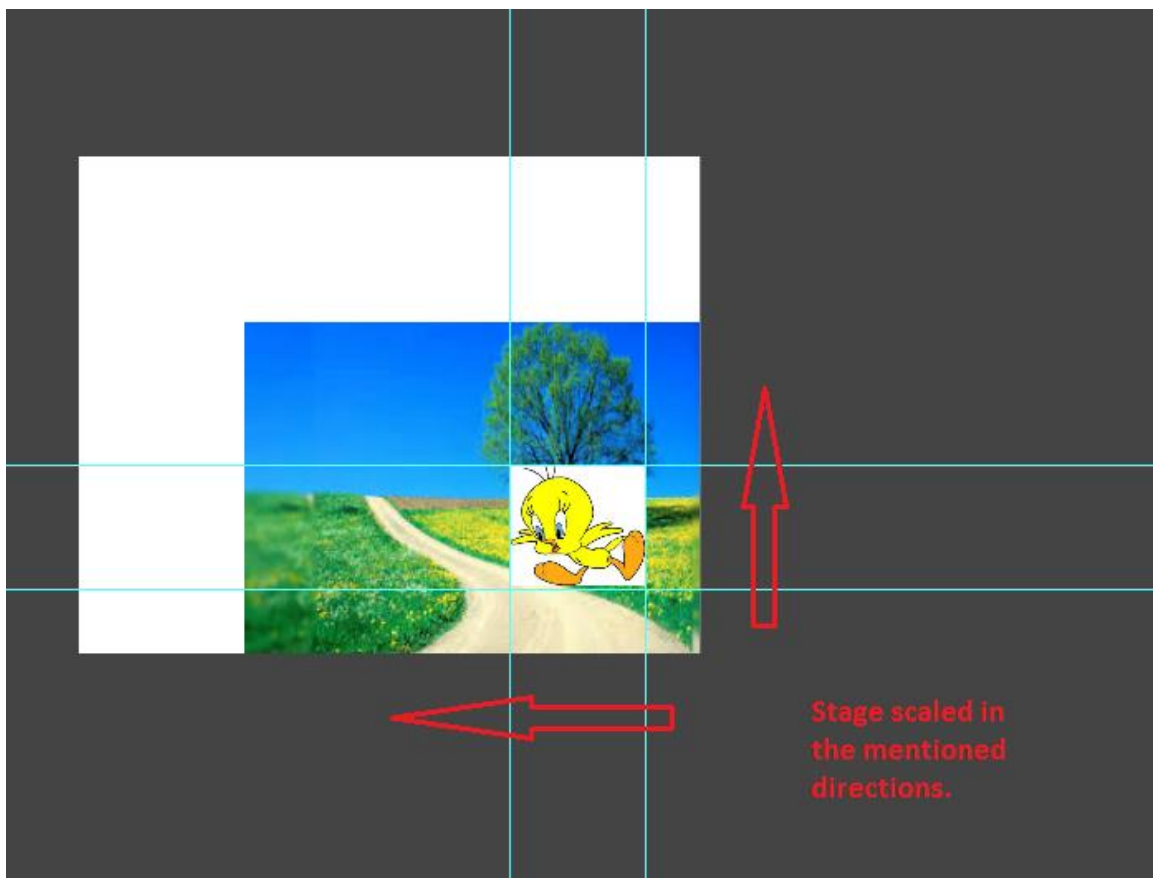

Figure 11 Stage scaled in the set direction from the anchor point at the bottom right corner

You can also use multi-touch gestures in compatible devices.

## Use rulers

When rulers show, they appear along the top and left sides of the document. You can change the unit of measure used in the rulers from the default of pixels to another unit. When you move an element on the Stage with the rulers displayed, lines indicating the element's dimensions appear on the rulers.

- To show or hide rulers, select View > Rulers.
- To specify the rulers' unit of measure for a document, select Modify > Document, and select a unit from the Ruler Units menu.

## Use guides

When rulers show (View > Rulers), you can drag horizontal and vertical guides from the rulers onto the Stage.

When you create nested timelines, draggable guides appear on the Stage only when the Timeline in which they were created is active.

To create custom guides or irregular guides, use guide layers.

- To display or hide the drawing guides, select View > Guides > Show Guides. *If the grid is visible and Snap to Grid is turned on when you create guides, guides snap to the grid.*
- To turn snapping to guides on or off, select View > Snapping > Snap to Guides. *Snapping to guides takes precedence over snapping to the grid in places where guides fall between grid lines.*
- To move a guide, click anywhere on the ruler with the Selection tool and drag the guide to the desired place on the Stage.
- To remove a guide, use the Selection tool with guides unlocked to drag the guide to the horizontal or vertical ruler.
- To lock guides, select View > Guides > Lock Guides or use the Lock Guides option in the Edit Guides (View > Guides > Edit Guides) dialog box.
- To clear guides, select View > Guides > Clear Guides. If you are in document-editing mode, all guides in the document are cleared. If you are in symbol-editing mode, only guides used in symbols are cleared.

## Set guide preferences

- Select View > Guides > Edit Guides and do any of the following:
  - ❖ To set Color, click the triangle in the color box and select a guide line color from the palette. The default guide color is green.
  - ❖ To display or hide guides, select or deselect Show Guides.
  - ❖ To turn snapping to guides on or off, select or deselect Snap To Guides.
  - ❖ Select or deselect Lock Guides.
  - ❖ To set Snap Accuracy, select an option from the pop-up menu.

- ❖ To remove all guides, click Clear All. Clear All removes all guides from the current scene.
- ❖ To save the current settings as the default, click Save Default.
- Click OK.

## Use the grid

The grid appears in a document as a set of lines behind the artwork in all scenes.

Display or hide the drawing grid - Do one of the following: -

- Select View > Grid > Show Grid.
- Press Control+" (quote) (Windows) or Command+" (quote) (Macintosh).

### Turn snapping to grid lines on or off

- Select View > Snapping > Snap to Grid.

### Set grid preferences

- Select View > Grid > Edit Grid and select from the options.
- To save the current settings as the default, click Save Default.

## Animate Toolbar

Animate 2020 release provides the capability to add, remove, combine or rearrange the Tools the way you want. Click the More Options icon ... in the toolbar to open the Tools Palette.

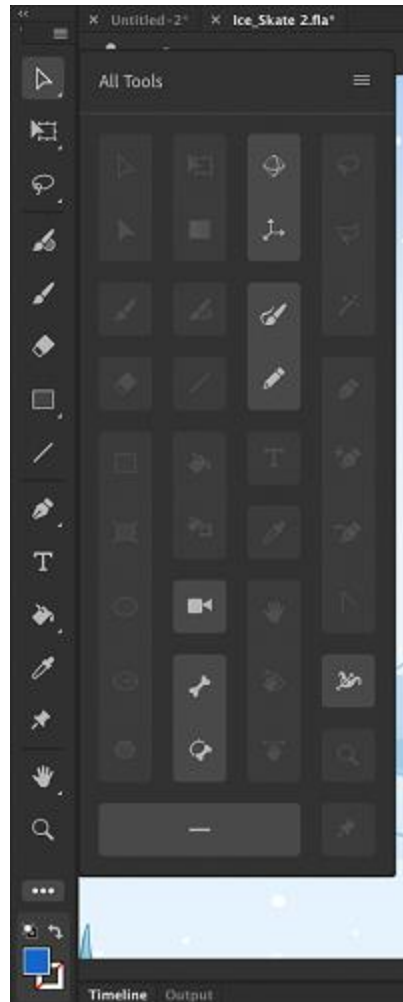

Figure 12 Animate Toolbar

*Figure 13 Toolbar palette*

You can drag tools from the Toolbar and drop it to the Tools Palette to remove them. Similarly, you can bring in tools from Tools Palette to your Toolbar by drag drop them at the desired location in Toolbar.

Additionally, with these enhancements, you can:

- Add/Remove tools from Tools panel to/from Tools Palette.
- Combine tools into a tool group by drag drop a tool over another tool or a group.
- Rearrange a tool above or below a specific tool or group by drag drop the selected tool above or below the specific tool.

## **LOGICAL GROUPING OF TOOLS**

You can make desired logical grouping of tools by adding a spacer between the list of tools. Drag and drop the spacer from the Tools Palette to the Tools panel and create such grouping.

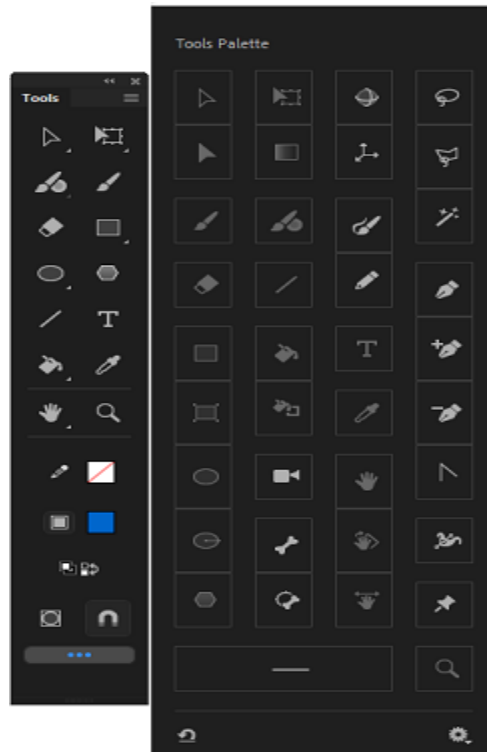

Figure 14 Logical grouping with spacer

## TEAR OFF TOOLBAR

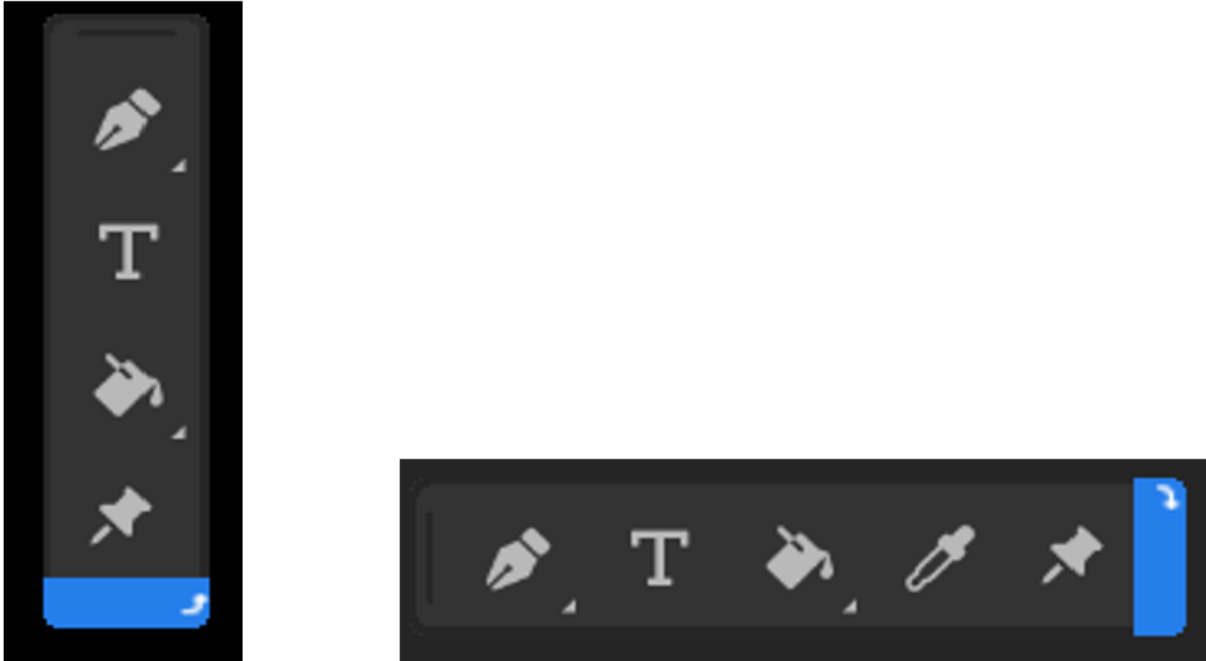

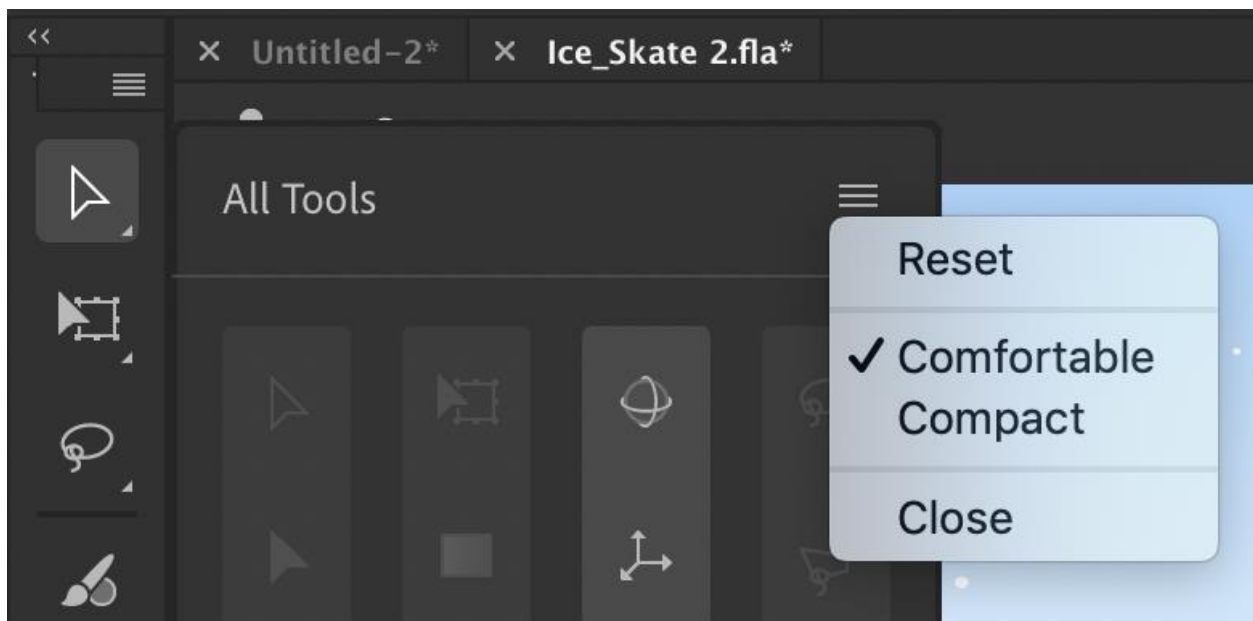

Figure 15 Tear off toolbar

Once the Spacer is added, you can Tear-off the toolbar sub-group by dragging the spacer outside of the Tools panel to the desired location of your work area. You can also merge the Tear-off toolbar back to the Tools panel. Select and drag the Tear-off toolbar to the Tools panel.

*Figure 16 Tear off flipping*

Tear-off toolbar can easily be reoriented to horizontal or vertical by clicking at the bottom highlighted section of the tool on mouse over.

*Figure 17 Reset toolbar*

## Resetting toolbar

Select the Reset option in the Tools Palette hamburger menu to set the Tools panel to its default state.

## SUB-TOOLBAR OPTIONS

### Fill color and Stroke Color

The fill color and stroke color section of the tool bar has been modified similar to Photoshop and illustrator Tools panel for consistency and easy access.

### Access to Brush and Eraser Modes

Now, you can also add keyboard shortcuts to Brush Modes and Eraser Modes.

- Create keyboard shortcuts on Mac, click Animate>Keyboard Shortcuts
- Create keyboard shortcuts on Windows, click Edit> Keyboard Shortcuts. Access these options with one press when the tool is enabled.

*Figure 18 Fill color and strokes*

*Figure 19 Erase mode*

*Figure 20 Brush mode*

## Use the Tools panel

The tools in the Tools panel let you draw, paint, select, and modify artwork, as well as change the view of the Stage. The Tools panel is divided into four sections:

- The tools area contains drawing, painting, and selection tools.
- The view area contains tools for zooming and panning in the application window.
- The colors area contains modifiers for stroke and fill colors.
- The options area contains modifiers for the currently selected tool. Modifiers affect the tool's painting or editing operations.

To show or hide the Tools panel, select **Window > Tools**.

## Select tools

- Do one of the following:
  - ❖ Click the tool in the Tools panel. Depending on the tool you select, a set of modifiers might appear in the options area at the bottom of the Tools panel.

- ❖ Press the tool's keyboard shortcut. To view the keyboard shortcuts, select Edit > Keyboard Shortcuts (Windows) or Animate > Keyboard Shortcuts (Macintosh). On the Macintosh, you might need to move the mouse to see the new pointer appear.
- ❖ To select a tool located in the pop-up menu for a visible tool such as the Rectangle tool, press the icon of the visible tool and select another tool from the pop-up menu.

### **Pressure and Tilt in Paint Brush**

Animate provides Pressure and Tilt support for strokes drawn using the Paint brush tool. You can draw art and pattern strokes with variable width, dependent on the applied pressure or tilt on the stylus. For further refinement, use the Width tool to adjust the width points.

Pressure and tilt icons in the tool bar are displayed only if you have connected a Wacom pressure-sensitive tablet to your computer.

### **Use context menus**

Context menus contain commands relevant to the current selection. For example, when you select a frame in the Timeline window, the context menu contains commands for creating, deleting, and modifying frames and keyframes. Context menus exist for many items and controls in many locations, including on the Stage, in the Timeline, in the Library panel, and in the Actions panel.

- Right-click (Windows) or Control-click (Macintosh) an item.
